Egypt, Cairo, 6 October

EDUCATION

Graduated July/ 2025 A, Akhbar El-Yom Academy| 6 October.

EXPERIENCE

Apr 2025 – Present

Full Stack Developer, Anytime Software

Front-End Developer: Developed responsive, user-friendly interfaces using React js, which increased user engagement and improved performance.

Back-End Developer: Built and maintained scalable back-end services using Nest.js and Node.js, focusing on optimizing performance and ensuring secure API integrations.

Testing & Automation: Set up an automated testing environment with Jest that cut down manual testing time significantly.

Sep 2023 – June 2024

Instructor, GDSC (University)

- Delivered educational sessions on HTML, CSS, and JavaScript within the GDSC community.
- Developed skills in presenting and teaching web development technologies.
- Improved confidence and proficiency in public speaking and technical explanations.

May 2023 – Nov 2023

Freelancer, Fetra App (Remote)

- Updated and maintained the website using HTML, CSS, and JavaScript.
- Gained experience in effective communication through project collaboration.
- Utilized Git and GitHub for version control and team coordination.

Mar 2025 – Present

Full-stack Developer Intern, CodeAlpha (Remote)

- Delivering tasks and developing web applications using modern technologies.
- Enhancing skills in AJAX, Git, and other web development tools.
- Collaborating with teams to deliver high-quality software solutions..

Projects

Spotify Clone – Full-Stack Developer | [GitHub](#)

- Developed a Spotify clone using the MEAN stack, featuring artist data retrieval, top tracks, and album details via Spotify API. Built a responsive Angular front-end and a scalable Node.js backend with MongoDB. Implemented authentication, authorization, and performance optimization for a seamless user experience.

E-Commerce Market | [GitHub](#)

- Developed and deployed a full-stack e-commerce application using the MERN stack. Integrated secure payment gateways and implemented user authentication and authorization to enhance platform security. Managed deployment and maintenance to ensure seamless operation and user accessibility.

LinkedIn Clone | [GitHub](#)

- A web application built using Angular and Spring Boot, designed to replicate LinkedIn's core features. Users can sign up, create profiles with About, Experiences, and Languages sections, and track their activities. The app supports creating posts, adding comments, and liking content, providing an interactive experience for professional networking.

Forever Brand| [GitHub](#) | [Live Demo](#)

- e-commerce platform for clothing brands, offering a smooth shopping experience with user authentication, product browsing, and secure payments through GatePay and Stripe, built using a modern tech stack.
